SKILLS

JavaScript, HTML, CSS, React, TypeScript, SCSS, Figma.

ABOUT ME

Over half a year ago I decided to start learning programming. From the very beginning, I focused on learning how to create websites. I designed all my project in Figma and wrote them myself. I am still learning, and I can see the distance ahead, but it doesn't discourage me, it just encourages me to gain more knowledge.

PROJECTS

London Site   Github, Live Serwer

· Site created with HTML, SCSS and JavaScript devices.

· In this project, I focus on UI / UX.

Todo App   Github, Live Serwer

· Site created with React and TailWind.

· In this project, I focused on React functionality.

· Application for creating and editing tasks.

Cards   Github, Live Serwer

· Website created with React, without any kind of design.

· In this project, I only focused on the mechanical part of the website.

· A simple card game in which two players draw cards. The card with more strength wins the turn, then takes both cards from the table and places them on a separate deck. After all cards have been dealt out, shuffle the winning cards and use them as our deck.

Smart Wallet   Github

· Mobile application developed with React Native.

· Application made for learning React Native.

· An app for recording your income and expenses so that you can see your financial stats later.
